THIS is our 71st annual Catalog and we are starting the 72nd year of our business. In all those years we have encountered some very difficult times and been through some soul trying periods. However, we have along with this Northern Plains Country always managed to come through. On each such occasion new lessons in agriculture and horticulture, both for the region and for our business, have emerged. Apparently we are facing another difficult period but common sense and intelligence should see us through and we shall doubtless learn some new lessons again.

Through all the 72 years we have been breeding, selecting and developing better and more suitable plants and grains for Northern Plains conditions. We feel, therefore, that we are outstandingly fitted to serve residents in the Northern Plains territory. We have many customers throughout the Dakotas, Montana and Wyoming, as well as farther away who have been using our products for many years successfully. Realization of that fact has been a sustaining encouragement through all the tough periods. We hope to keep on serving our old customers and their children for many years to come.

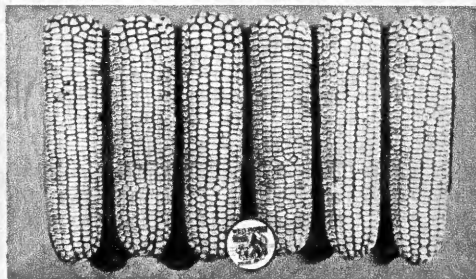

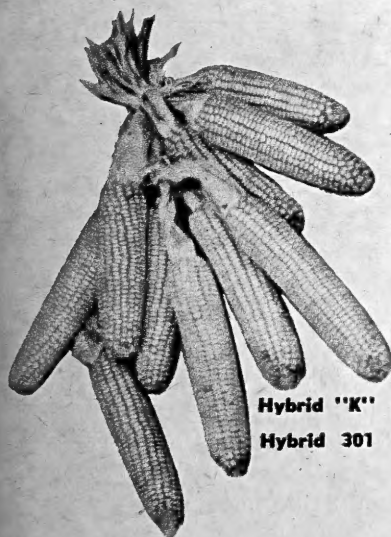

Changes are coming throughout the region. Irrigation may soon be greatly extended. Soil Conservation practices will also be extended and new methods and new crops are on their way. We hope to continue to serve our patrons in the future just as we served the gentleman in the picture at the head of this page 70 years ago.

If you are fed up on the kind of Hybrid Corn you have been getting, better try Will's Northern Great Plains bred and grown Hybrids for real Hybrid results. Try our Hybrid "K," Hybrid "A" or Nodak No. 301. See page 47.

NODAK HYBRID 301. A beautiful yellow dent variety developed at the N. D. Experiment Station by Wm. Wiidakas, the Corn breeder. 83 days, a heavy yielder, perhaps the leading yellow dent in North Dakota.

A Few Suggestions

The Sweet Pea plant or vine succeeds best in cool, moist, yet well drained soil. To secure the longest possible season of bloom the seed must be planted early. The best mode of planting is the trench method. The trench is dug two feet deep and two feet wide, and filled nearly to the surface of the ground with a mixture of well rotted manure and rich soil, with a six-inch layer of soil at the top. Soaking seed in water over night before planting will hasten germination. The seed should be sown, two inches deep, at the rate of one ounce to twenty feet. During dry weather the ground should be thoroughly soaked once or twice each week. A light spraying of the vines in the evening during hot weather will be found beneficial, and the earth should at all times be kept loose about the plants to a depth of two inches. Sweet Peas should be cut early in the morning and the more closely the flowers are kept cut off the longer will be the period of bloom. Remember, the vines quickly wither, if allowed to produce any great amount of seed. Spray thoroughly and often to prevent infection by aphids.

WILL'S BEANS

Belong in Every Garden

CULTURE: Beans should not be planted until the ground is warm, as cold and wet weather will cause the seed to rot. For garden culture plant four or five seeds in hills one foot apart, and the rows 18 inches apart. For field culture make the rows three or three and one-half feet apart, and cover with two inches mellow soil. Do not hoe or cultivate while the plants are wet with dew or rain, as getting the leaves bespattered with earth causes rust, which injures the crop. One pound of beans is a little more than one pint.

A Will Introduction GREAT NORTHERN—The Best Baking Bean

Everyone knows the Great Northern Beans, but few know that the seed was originally obtained over sixty years ago by Oscar H. Will from Son of a Star, an Hidatsa Indian, by whose tribe it had been grown for many years. **Hardy, a heavy yielder and early,** it is much more tender and more quickly cooked than the Navy Bean, and one of the most largely grown field Beans.

This is the most popular sort and gives big returns with little care. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c; $\frac{1}{2}$ lb., \$1.10; 1 lb., \$2.00, postpaid.

Cabbage

Ask for Prices on Quantities Larger Than Listed

Culture: For early plants sow seed in boxes indoors or in hot bed, allowing 6 to 7 weeks from sowing to setting in the open ground. Some recommend planting the seeds in the field, 3 or 4 seeds to a hill and leaving the strongest plant. One ounce of seed will produce from 1500 to 2000 plants in open ground, 3000 in frames. 4 to 6 ounces of seed is required to produce plants for an acre. No. of days is from setting plants.

PIONEER HYBRID SEED CORN

Sure Production

Mr. Pioneer Hybrid says:

Another year with a short, cool season should convince dwellers in the Northern Great Plains that the Southern and Eastern Hybrids which have been so profusely distributed in the area, cannot be relied upon to produce a crop of Corn.

Wills Pioneer Hybrids Are Bred and Grown for Great Plains Conditions

We are the only commercial Seed House in the North that has conducted a long continued project of Corn inbreeding and crossing with special reference to Northern Plains conditions.

Early and Cold Resistant

And best germinating, Pioneer Hybrids are treated with non-poisonous dust. This increases the seeds' ability to fight off disease and make a good stand.

Wind Resistant

A strong stalk with a massive root system gives added protection against high winds.

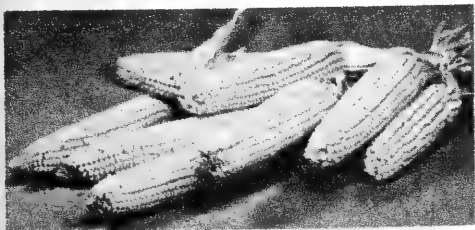

High Yields

Will's Pioneer Hybrids' exceptionally high yields bring Repeat Buyers who want to grow these remarkable hybrids year after year.

Drought Resistant

Pioneer Hybrids are bred from the hardiest corns grown in the Great Plains area—increasing their drought resistance for your protection.

HYBRID "A." 78 days. A high yielding early hybrid directly produced from selected strains of Will's Falconer Corn. A very greatly improved uniform type Falconer with ears up 15 inches or more.

Hybrid K

PIONEER HYBRID "K."

80 days. Falconer and Nodak 301 combination. Heaviest producer of dry ripe corn in our trials of many kinds, this last year. A sure corn to ripen and outstanding in all respects.

A handsome yellow dent.

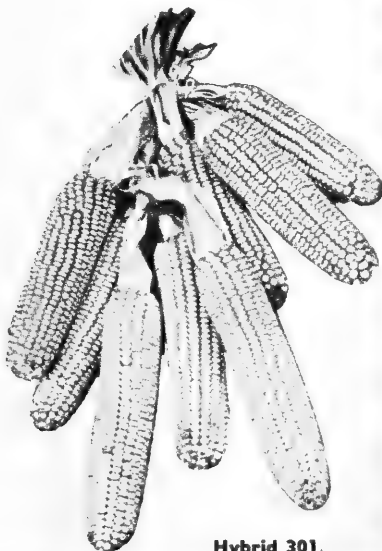

NODAK HYBRID No. 301. 83 days. Somewhat earlier than No. 201 and a little sturdier. We have found it to do somewhat

better under our local conditions. A beautiful appearing yellow dent and the hardiest and surest pure yellow dent that we have found in a long list of hybrids.

Hybrid A

HYBRID PRICES. Large and medium flats. Postpaid, lb., 50c; F.O.B. Bismarck, 7 lbs. (enough for 1 acre) \$2.00; ½ bu., \$5.50; bu., \$10.00. Large and medium rounds, small flats; F.O.B. here, 7 lbs., \$1.40; ½ bu., \$4.50; bu. \$8.00.

ACME FODDER CORN. Mixed Dent of Great Plains Types. Almost perfect as a silage corn. This is a mixture of off-type early dents and semi-dents with a previous year's cross. This sort of combination means heavy growth and yield combined with the natural earliness of its components. Easily handled with a binder. Lb., 50c, postpaid. F.O.B. here; 10 lbs., \$1.25; ½ bu., \$3.00; bu., \$5.00.

4X FODDER CORN — Southern Grown, Tall, Leafy

The 4X is, we consider, the very best procurable fodder Corn for Northwestern conditions. We get

this grown just far enough south so that **maximum quantity of fodder is produced** and at the same time the stalks come near

enough to maturity so that they are **not all water**. The best time to cut Corn for fodder is when the kernels are just past the roasting ear stage. Sow or drill ten pounds to one-half bushel per acre, if planted with a planter; 2½ bu. if broadcast. F.O.B. here. See blue price list.

Sweet Fodder Corn

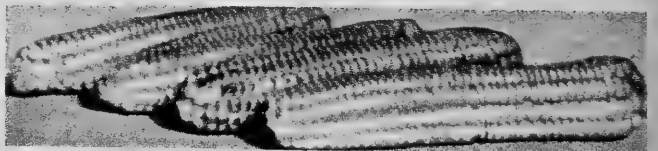

SWEET FODDER CORN — Wonderful Feed for Milch Cows

Sweet Fodder is coming to occupy a place of very high esteem as a feed for milch cows. Owing to the fact that its sugar content is so high it is a more concentrated feed than the ordinary Corn. It is likewise a heavy yielder as it is so bushy, and there are no heavy, coarse stalks which are usually waste. Lb., 30c, postpaid. F.O.B. here; 10 lbs., \$2.00; larger lots @ 17c per lb.

SOUTH DAKOTA RAINBOW. A late strain from the Indians of southern South Dakota.

Produces a tremendous tonnage of fodder and silage with lots of ears as well. Postpaid, 1 lb., 50c. See blue price list.

NATIVE YELLOW FLOUR CORN. (80 day.) Most nutritious and most easily consumed by Stock of any Corn variety. This is due to the soft flour kernels which contain more feed value than the Flints or Dents. Drouth and frost resistant, early and a tremendous yielder. Ideal for feeding off in the field. Postpaid, 1 lb., 50c; F.O.B. here; 10 lbs., \$1.45; ½ bu., \$4.00; bu., \$8.00.

FEEDING CORN IN THE NORTHERN PLAINS

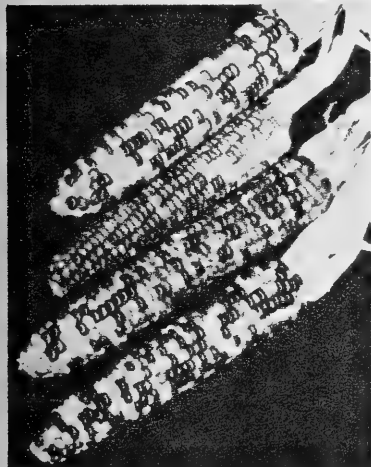

Corn is grown for feed. The corn that produces the most in both ears and stalks is the cheapest to feed. It costs money to pick corn—hogs, cattle and sheep pick for nothing. Feeding corn in the field is the most economical way to handle.

For feeding in the field the highest yields always come from flint corn, flour corn and semi-dents.

HARDY FLINT CORN

Developed by the Indians for Northern Plains Planting

Great Plains Rainbow. Sure maturing, a tremendous yielder and a wonderful corn for the silo or to feed in the field. Developed by John Sarvis at the U.S. Great Plains Experiment Station at Mandan. Will outyield all Dents and Hybrids year in and year out. We have a remarkably fine stock. Lb., 70c, postpaid, F.O.B. Bismarck; 10 lbs., \$2.00; ½ bu., \$3.70; bu. \$7.00.

WILL'S GEHU YELLOW FLINT

Seventy-Five-Day Corn

The best known of our native early flints. We have shipped it to every continent. It has been carefully bred by us for years and shows the effect of this breeding. It is leafy and produces a tremendous amount of excellent fodder, since there is no heavy stalk, and every part of the plant is utilized. It is drought, frost and hail resistant to a wonderful extent in addition to its great earliness. Gehu is of a lemon-yellow color, ears mostly twelve-rowed. 7 to 10 inches in length. Stalks 4 to 6 feet. Ears 10 to 18 inches from the ground. Lb., 70c, postpaid; F.O.B. here: 10 lbs., \$2.00; ½ bu., \$3.70; bu., \$7.00.

BURLEIGH CO. MIXED or DAKOTA SQUAW CORN

Seventy-Day Corn

Hardy—Early—Heavy Yielding. This is a mixed form of the early flint and is the first variety listed by us after our business was started. It is very resistant to both drought and frost, and fully as heavy a yielder as any variety of early flint. It is of mixed colors, yellow, white, blue and red predominating, ears long and

slender, mostly eight-rowed. This Corn shells out heavier than any other variety. Lb., 70c, postpaid; F.O.B. here: 10 lbs., \$2.00; ½ bu., \$3.70; bu., \$7.00.

ASSINIBOINE FLINT CORN

FALCONER SEED CORN

**Oscar H. Will & Co. Strain—Highest
Yielding Corn for the Northwest**

Falconer corn is grown by the hundreds of thousands of acres now and many thousands of these acres of so-called Falconer are off type, unselected or poorly selected scrub corn of the poorest type and certain to make inferior yields.

We introduced Falconer Corn. Falconer in careful tests over most of our state has outyielded every variety including hybrids.

The answer seems obvious then. Buy genuine Falconer of true, high yielding strain from Oscar H. Will & Co. Lb., 60c, postpaid. F.O.B. here: 10 lbs., \$1.70; ½ bu., \$3.75; bu., \$5.50.

WILL'S PIONEER BRAND LAWN GRASS SEED

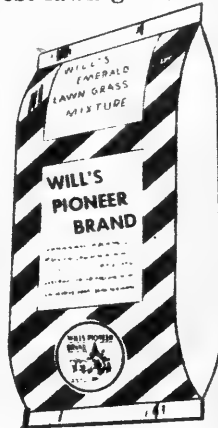

A note on the lawn grass situation

Lawn grass seed prices are much higher this year due to an extremely short crop of Kentucky Blue Grass, and relatively short crops of other lawn grasses. For those who want a nice lawn, but do not wish to pay the high prices for our regular mixtures, we recommend Creeping Red Fescue, and for the tougher, less cared-for lawn, straight Fairway Crested Wheat Grass is fine.

WILL'S EMERALD LAWN GRASS MIXTURE

Registered U.S. Patent Office

Our top lawn grass mixture. Kentucky Bluegrass is the foundation. Our best lawn grass for a lawn that will be well tended and watered. 1 lb. postpaid \$1.80. 5 lbs. F.O.B. Bismarck \$8.40.

WILL'S DAKOTA LAWN GRASS MIXTURE

A good utility mixture for a lawn that may have to do without as much water and care as the Emerald. Fine for boulevards and large public grounds. Has some coarser and hardier grasses. 1 lb. \$1.35 postpaid. 5 lbs. \$6.00 F.O.B. Bismarck.

KENTUCKY BLUEGRASS. We may have it available at planting time. Due to price and supply situation, we cannot list the price at this time. Please write for prices.

REDTOP. Fine for seeding in shady spots, and very damp or swampy areas. 1 lb. postpaid \$1.50. For larger quantities, see blue price list.

Top Quality Lawn Grasses For This Year of Lawn Grass Seed Shortages

FOR A FINE LAWN CREEPING RED FESCUE

FOR A TOUGHER LAWN FAIRWAY CRESTED WHEAT GRASS

Recommended for a good hardy lawn that requires a minimum of water and care. Fine for boulevards, parks, and large grassed areas. Fairly fine, stands cutting well, and stays green quite late, although it is a trifle bunchy. 1 lb. postpaid 65c F.O.B. Bismarck; 5 lbs. \$2.50. For larger quantities, see blue price list.

ILLAHEE FESCUE. A more drought resistant type of creeping red fescue. 1 lb. postpaid \$1.40; F.O.B. Bismarck 5 lbs. \$6.25. For larger quantities, see blue price list.

BUFFALO GRASS. A wonderful lawn for dry conditions. Spreads by means of runners to produce a dense mat on the ground. Available in both seed and plants. Requires little mowing.

PLANTS. Minimum order 100 plants. Plant from 6 to 15 inches apart. Plant cannot be reset until new growth has started, so cannot be shipped until May or June. 100 plants postpaid (enough for 140 sq. ft.) 85c; 500 plants \$3.75. F.O.B. Bismarck, 1000 plants \$5.50. Plants from Theodore Roosevelt's Elkhorn Ranch strain—finer and slower growing—100 plants 95c, postpaid.

FULTONET for new lawns and slopes. A strong, open mesh material that will hold both seed and sod firmly in place preventing washouts and allowing the lawn to get firmly established. Remove when grass reaches 2½ inches in height. 36 inches wide. Prices F.O.B. Bismarck per yard: 1 to 24 yards 23c; 25 to 99 yards 22c; 100 yards and over 20c.

CREEPING BENT GRASS. A very popular grass for lawns. Beautiful once established, but it requires careful planting, tending, and lots of water until it has made a small growth. Postpaid 1 lb. \$1.45; 5 lbs. \$6.50 F.O.B. Bismarck.

A Buffalo Grass Lawn

Directions for Making Lawns

The seed bed should be spaded or plowed to a depth of about 5 inches. Lumps should be broken, the surface smoothed, and well firmed. Sow seed evenly on a quiet day, rake in well, and roll if possible. Seed at the rate of 1 lb. for 200 square feet, and water thoroughly.

For the best lawns, good loam soil is needed to a depth of at least three inches. Emerald Lawn Mixture should be used for the best lawns where water is available, with creeping red fescue as a good second choice. Redtop is good for shady spots. For more difficult conditions where watering is less frequent, use Dakota Lawn Mixture, or Fairway Crested Wheat Grass.

For a dry land lawn, we recommend Buffalo Grass, plants or seed, Fairway Crested Wheat Grass, or Slender Wheat Grass.

Keep well watered until grass is well up. The newly sprouted grass is very tender. Fertilize from year to year, and during the year, as indicated by the condition of the lawn.

We are always happy to advise you on grass problems, and to make up special mixtures for football fields, other public grounds, and any special situations.

SHADE AND ORNAMENTAL TREES

DROPMORE or HARBIN ELM. This is an extremely hardy selection of the Siberian Elm, grown from seed which came from far north in Asia and selected in Manitoba. It has proven to be absolutely hardy under all conditions and to possess all the other good qualities of the common Chinese or Siberian Elm. Seedlings, 18 to 24 in., each, 30c; 100, \$25.00. 2 to 3 ft., each, 85c; 5 for \$4.00; 10 for \$7.50; 3 to 4 ft., each, 90c; 5 for \$4.25. Prices F.O.B. Bismarck.

CHINESE or SIBERIAN ELM. As a wood lot, shelter belt or grove tree and as a formal or natural hedge this tree has a very definite place in Northwestern

planting. Drought resistant and rapid growing beyond almost any other sort.

The occasional winter damage explains why we have steadily refused to recommend this tree as a street or lawn tree. In spite of the winter injury, which has occurred only once every 15 or 20 years, we still feel that this very fast growing and drought resistant tree possesses great value in the Great Plains. Even if it has to be cut back to the ground it will recover in a year or so and produce more new growth than could be obtained in the same time by replanting with any other tree. Seedlings, 12 to 18 in., & 18 to 24 in., see page 59. 3 to 4 ft., each, 43c; 10 for \$4.00; 4 to 6 ft., each, 75c; 10 for \$7.00; 6 to 8 ft., each, \$1.00; 10 for \$9.00.

We have been headquarters for cottonwoods for seventy years. Prices: for seedlings, see page 59. 3 to 4 ft., each, 15c; 10 for \$1.25; 4 to 6 ft., each, 40c; 5 for \$1.75; 6 to 8 ft., each, 75c; 10 for \$7.00.
